Looks good Jennifer. Before the tribe meets with the RD we need to talk about the position we want to take regarding the development of the BA (this is a huge workload and not necessarily our issue) as well as how hard of a position do we want to take on Olympic vs Pacific oysters. Thanks for doing a good job on this issue

FYI. Today we provided Jamestown S'Klallam Tribe a thumb drive with survey data and references to meet their request (below) to the best of our ability.

They called this afternoon and further requested our assistance with outlining marine debris removal techniques and timing that would work for the Refuge (the BiOP requires removal every three months which might cause worse habitat damage and increased disturbance during sensitive times).

I let them know that we would provide them with some thoughts on the subject as soon as we could, but that these next two months are our busiest time for visitor use and biological program activities, not to mention budget and agreement deadlines. Given the work that is already on our plate, I could not provide them with any concrete timeline for responding to their request.

Just want to make sure that you are kept in the loop.

Subject: [EXTERNAL] JST and Dungeness Refuge Meeting: data requests and meeting

notes

To: "BrownScott, Jennifer" <jennifer_brownscoth@fws.gov>

Hello Jennifer,

Jamestown would like to thank you and Lorenz for meeting with Hansi, Diana and I regarding the Tribe's aquaculture project on the Dungeness lease site. We found the meeting to be quite productive and very much look forward to working with the Refuge as the Tribe moves forward with the Individual Permit. Attached please find the notes from our meeting on 5/24/2018.

Per our discussion, the Tribe is requesting any available data/information that the Refuge may have on the following:

- Shore bird/water fowl data – we are happy to receive raw data or in database format, from any time period and location collected within or in close proximity to the Refuge. If time constraints for compiling data older datasets are of concern, our preferred time period is 1980 – 2018.
- Shellfish aquaculture contribution to marine debris
- Forage fish data
- Benthic/epibenthic community structure and composition data
- Human disturbance data – particularly response of shore bird/water fowl to human activities

Any quantitative/qualitative data or even anecdotal information on any of the above would be extremely helpful as we prepare our site-specific environmental assessment. The Tribe is happy to coordinate with Sue Thomas in acquiring any available data and information about methodologies used.

Thank you very much for your assistance as we move forward with this process.

Sincerely,

Liz Tobin
