---

I'd say Dunlin, Western Sandpiper (highest #s and shown to avoid aquaculture sites) and Brant (uniqueness of grit, feeding & roosting site as well as high proportion on the refuge in some yrs). In some regards Wigeon (high use of shoreline adj to site).

I'm meeting LS at the office today at 3:30 to conduct survey. Would like to stop in the office to download and print a few things at 3. Do you know if anyone will be in? Should I just send an email to the likely suspects?

Can we **easily** answer Darlene's questions (below)? If not, I'll just grab the numbers out of the comment that we provided to the permit process, and tell her that is what we have.

Good morning, Jennifer.

What are the top migrating resident and migrating birds at the Dungeness Refuge you have concerns about; that we should be most concerned about?
