---

Thanks for our conversation Jennifer. Here is the language related to debris patrols. We want to figure out the best way to accomplish this. Please let us know what you and Sue think may work best. The Tribe is open to any/all suggestions and methods. Thank you very much for the data that you sent off to Liz. Have a nice Fourth of July. I understand that we won't hear back on this until close to the end of July ---- so actually, have a nice Most of July. Hansi

22. At least once every three months, beaches in the project vicinity will be patrolled by crews who will retrieve debris (e.g., anti-predator nets, bags, stakes, disks, tubes) that escape from the project area. Within the project vicinity, locations will be identified where debris tends to accumulate due to wave, current, or wind action, and after weather events these locations shall be patrolled by crews who will remove and dispose of shellfish related debris appropriately. A record shall be maintained with the following information and the record will be made available upon request to the Corps, NMFS, and USFWS: date of patrol, location of areas patrolled, description of the type and amount of retrieved debris, other pertinent information.
