---

Snow is still coming down here!

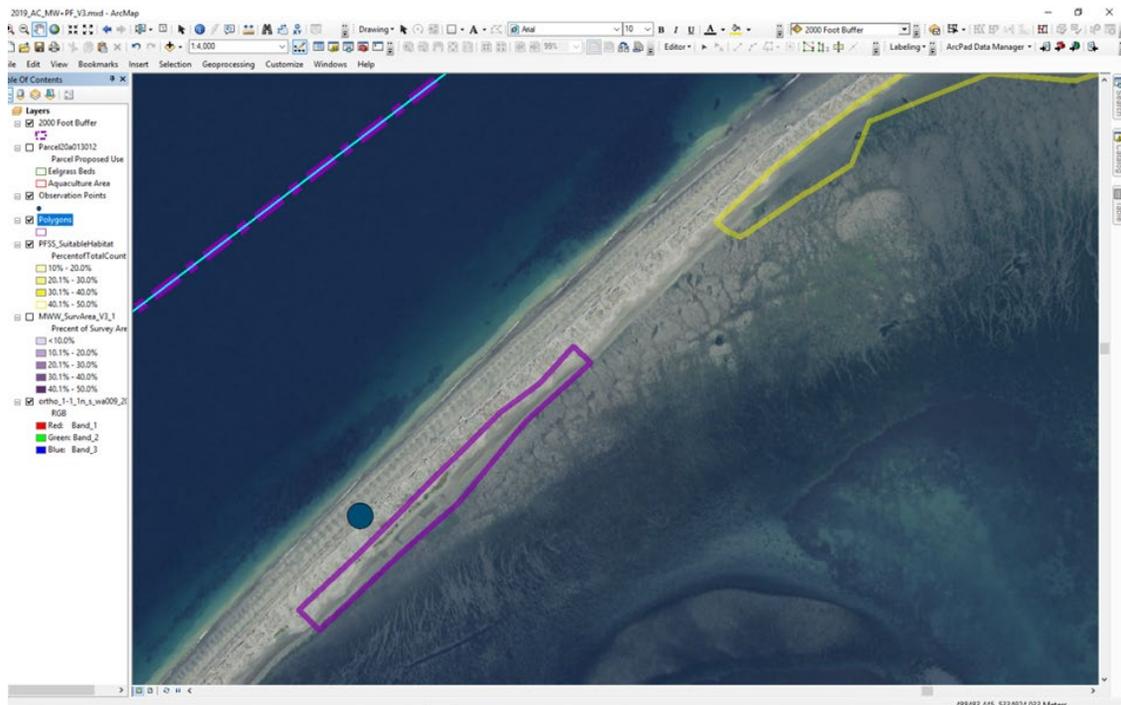

Here are some beautified maps.

Much!

Thanks. Still snowing hard! :)

Looks good. Could you move the sw corner of the mm2 polygon out a bit to the southern edge of the lighter sand area?

Sue

Ok, could you adjust the southern boundary, starting with the se end of mm2 so that it is the same extent at mm3's sw point and taper in toward the sw boundary of mm2? The shoreline is much narrower there and its really hard to draw without standing there...which I did eventually do for the other delineated areas.

Thanks!

It looks like the eastern boundary extends out into the water more than the western boundary of MM 3. But since you used imagery I think that's fine.

We have some flurries here!

Okay, so the version of google earth on my comp is really squirrely. But here is what I've got. How does that jive with mm 3 outer extent based on how it looks in the 2013 imagery?

Its SNOWING!!!!!!!!!!!! Yay!
