

Fish Slough milkvetch

- 1** Fish Slough milkvetch is sprawling! Its stems can reach up to 3-feet long, roughly the length of your average guitar!
- 2** This plant is in the bean family. Similar to snap peas, this plant produces pods known as legumes. However these pods are speckled and a lot cooler than your average snap pea pod. Look up the plant to see for yourself!
- 3** Fish Slough milkvetch is found only in a 6-mile area near Bishop, CA. Its entire habitat is a desert wetland that is dry during most of the year.

Status:

Threatened

Habitat:

Alkali meadows adjacent to aquatic habitat

Soil:

Alkali soil, aka very salty

Threats:

Changes to the water table, Habitat destruction, Nonnative plants, Cattle grazing

Needs for Recovery:
