Atwell Project No. 20004829

Submitted by Atwell, LLC

January 2023

EXECUTIVE SUMMARY

Bluff Point Wind Energy Center (project) is an operational 119.7-megawatt (MW) wind facility equipped with 57 General Electric 2.1 MW wind turbine generators located in Jay and Randolph counties, Indiana. The project consists of approximately 23,613 acres and is located approximately five miles south of the city of Portland in east-central Indiana. NextEra Energy Bluff Point, LLC (BPW) contracted Atwell, LLC (Atwell) to determine the potential impact on bats during the spring, summer, and fall seasons of 2022.

In March 2021, BPW submitted a Habitat Conservation Plan (HCP) to the U.S. Fish and Wildlife Service – Indiana Field Office (USFWS – INFO) in support of an Incidental Take Permit (ITP) for federally listed endangered Indiana bats (*Myotis sodalis*) and federally listed threatened northern long-eared bats (*Myotis septentrionalis*). The USFWS – INFO issued an ITP on March 25, 2021, which authorizes the take of 165 Indiana bats and 84 northern long-eared bats over the 30-year permit term and is subject to compliance with, and implementation of the HCP. The Bluff Point Wind Energy Center has been operating under the ITP requirements since April 1, 2021, which included conducting post-construction mortality monitoring for bats. This report summarizes the second year of baseline monitoring under the HCP.

In total, 4,577 road and pad plot and 2,159 full plot standardized survey searches were completed from April 4, 2022, through October 15, 2022. Fifty-seven turbines were searched during the spring and fall seasons, and 32 turbines were searched within the USFWS designated buffer areas during the summer. Turbines were typically searched weekly in the spring and daily in the summer and fall. Prior to the start of standardized surveys each season, a “clearance” search was performed to remove any carcasses from search plots. Pre-spring clearance searches were conducted at 56 turbines between March 28 and March 31, 2022, and at one turbine (turbine 26) on April 4, 2022. Pre-summer clearance searches were conducted at all 32 summer turbines on May 16, 2022. Pre-fall clearance searches were conducted on August 1, 2022, at 25 turbines that were not searched during the summer season. All 32 summer turbines were searched on July 31, 2022, which served as both standardized summer searches and pre-fall clearance searches.

During the spring, summer, and fall, a total of 235 bats representing seven species were found during standardized searches, including: silver-haired bat (*Lasiurus noctivagus*; 69 fatalities), eastern red bat (*Lasiurus borealis*; 68 fatalities), big brown bat (*Eptesicus fuscus*; 56 fatalities), hoary bat (*Lasiurus cinereus*; 37 fatalities), Seminole bat (*Lasiurus seminolus*; three fatalities), Indiana bat (federally and state-listed endangered; one fatality) and evening bat (*Nycticeius humeralis*; state-listed endangered; one fatality).

In total, 185 searcher efficiency trial carcasses consisting of bat surrogates (i.e., commercially available mice) were placed throughout the study period. In the spring, searcher efficiency rates

were 84.0% and 92.0% at full plots and road and pad plots, respectively. In the summer, searcher efficiency rates were 72.0% and 88.0% at full plots and road and pad plots, respectively. In the fall, searcher efficiency rates were 77.8% and 97.1% at full plots and road and pad plots, respectively.

In total, 132 carcass persistence trials were placed throughout the study, including 50 each in both the spring and fall, and 32 in the summer. The estimated overall median probabilities of persistence by day 1 were 0.86, 0.89, and 0.90 in spring, summer, and fall, respectively. The estimated overall median probabilities of persistence by day 7 were 0.56, 0.66, and 0.53 in spring, summer, and fall, respectively.

The spring, summer, and fall bat fatality estimates were 2.66 bats/turbine (1.27 bats/MW; 151.56 total bats), 4.07 bats/turbine (1.94 bats/MW; 130.14 total bats), and 20.27 bats/turbine (9.65 bats/MW; 1155.60 total bats), respectively.

One Indiana bat and no northern long-eared bat carcasses were found during standardized surveys. The median take estimate, based on modelling for each species, was four Indiana bat fatalities and zero northern long-eared bat fatalities in 2022. The estimated detection probability in 2022 for spring, summer, and fall combined was 0.268 (95% confidence interval: 0.241, 0.296; $Ba = 267.7299$ and $Bb = 731.4965$) and the mean mortality rate (λ) was 5.62 (95% confidence interval: 0.403, 17.570) for Indiana bats and 1.87 (95% confidence interval: 0.002, 9.426) for northern long-eared bats.

A detection probability of approximately 0.20 is expected during baseline monitoring (years 1 through 3). The overall detection probability following two years of baseline monitoring is 0.196 (95% confidence interval: 0.179, 0.214). The cumulative median take estimates for Indiana and northern long-eared bats after two years are six fatalities and one fatality, respectively, which are below the rates expected under HCP.

1 INTRODUCTION

NextEra Energy Bluff Point, LLC (BPW) is a limited liability company and an indirect wholly owned subsidiary of NextEra Energy Resources, LLC. Bluff Point Wind Energy Center (project) is an operational 119.7-megawatt (MW) wind farm equipped with 57 General Electric 2.1 MW wind turbine generators located in Jay and Randolph counties, Indiana (Figure 1).

BPW contracted Atwell, LLC (Atwell) to perform post-construction mortality monitoring (PCMM) surveys and evaluate the potential impact from project operations on bats during the 2022 season. This report documents the results of that work. The survey and statistical methods were developed in coordination with U.S. Fish and Wildlife Service (USFWS) and incorporated relevant guidance and research findings.

This study was conducted under a Habitat Conservation Plan (HCP) that was submitted to the USFWS in support of an application for an Incidental Take Permit (ITP; see Section 1.3) for the federally listed endangered Indiana bat (*Myotis sodalis*) and federally listed threatened northern long-eared bat (*Myotis septentrionalis*). This report covers the second year of baseline PCMM studies for the project since implementation of the HCP.

1.1 STUDY AREA

The project consists of approximately 23,613 acres and is located approximately five miles south of the city of Portland in east-central Indiana (Figure 1). The project spans portions of Madison, Pike, and Jefferson townships within Jay County, and portions of Franklin, Ward, and Jackson townships within Randolph County (Figure 1).

The topography within the project varies, with elevations ranging from approximately 980 and 1,060 feet (ft) above mean sea level. Portions of the project are relatively flat, and many areas are moderately undulating.

Overall, the project is dominated by agricultural land-use consisting mostly of corn (*Zea mays*) and soybeans (*Glycine max*). According to the 2016 National Land Cover Database, approximately 85.0% of the land is classified as cultivated crops (20,080.50 acres), followed by 7.3% (1,721.39 acres) classified as deciduous forest, 4.1% (963.41 acres) of developed/open space, and 2.3% (531.29 acres) classified as hay/open pasture. Herbaceous areas, open water, woody and emergent herbaceous wetlands, evergreen and mixed forest, developed areas, shrub/scrub, and barren land collectively make up approximately 1.3% (316.41 acres) of remaining land uses (Figure 2) (MRLC 2019). Conservation Reserve Program land is also located within the project area.

1.2 BUFFERED AREAS

In January 2012, USFWS and BPW established 1,000 ft protective buffers around forested lands that were identified as potential summer habitat for the federally listed endangered Indiana bat and federally listed threatened northern long-eared bat through desktop research, on-site investigation, and 2011 mist netting and telemetry surveys. These protective buffers (hereafter referred to singularly as a “bat avoidance buffer”) cover 13,524 acres of the 23,613-acre project and include 32 turbines from the total project array (Figure 3). The bat avoidance buffer was based on communication with the U.S. Fish and Wildlife Service – Indiana Field Office (USFWS – INFO) and was informed by desktop research, on-site investigation, and 2011 mist netting and telemetry surveys. Survey parameters and turbine operations for the spring, summer, and fall seasons of 2022 are addressed in the HCP, which designates specific curtailment strategies (see Section 1.3) for turbines within this buffered area.

1.3 INCIDENTAL TAKE PERMIT

BPW has determined that operation of the project may result in take of the federally listed endangered Indiana bat and the federally listed threatened northern long-eared bat. Section 9(a)(1)(B) of the Endangered Species Act (ESA), 16 U.S. Code (U.S.C.) § 1538 (a)(1)(B) states that it is unlawful for any person to “take” an endangered species. In addition, take of any threatened species is prohibited pursuant to 50 Code of Federal Regulations § 17.31, issued by the USFWS under the authority of Sections 4(d) and 9(a)(1)(G) of the ESA, 16 U.S.C, §§ 1533 (d) and 1538(a)(1)(G), respectively. Under the ESA, otherwise lawful activities that may cause or result in the incidental take of federally listed threatened or endangered species is prohibited. Section 10 of the ESA allows for certain limited exceptions to the ESA’s prohibitions for private actions. Section 10(a)(1)(B) of the ESA provides a mechanism for the USFWS to issue an ITP that authorizes the take of a species listed as threatened or endangered, provided that the take is incidental to, and not the purpose of, the operation of the otherwise lawful activity.

In March 2021, BPW submitted to the USFWS – INFO a final HCP in support of that ITP application and in accordance with the requirements set forth under Section 10(a)(1)(B) of the ESA, as amended, and applicable USFWS guidance documents (Atwell 2021).

On March 25, 2021, the USFWS – INFO issued BPW an incidental take permit (Permit Number: ESPER0005513), which authorizes the take of 165 Indiana bats and 84 northern long-eared bats over the 30-year permit term and is subject to compliance with, and implementation of the HCP. BPW seeks to reduce take of Indiana and northern long-eared bats by at least 50% from the authorized 30-year take limit through careful project planning and turbine siting (implemented prior to construction of the project), as well as implementation of operational curtailment strategies (Atwell 2021). These curtailment strategies are described in Section 1.3.1.

BPW has developed four post-construction mortality monitoring protocols to be used for the project: Preliminary Monitoring, Baseline Monitoring, Implementation Monitoring, and Adaptive Management Monitoring. Details of these protocols are described within the HCP (Atwell 2021). The timing of these protocols is implemented as follows:

- BPW performed preliminary monitoring at the project in 2018, 2019, and 2020. These studies were conducted under a technical assistance letter from the USFWS – INFO to allow for operations while BPW prepared the HCP.
- Baseline monitoring will be conducted for the first three years of operation under the ITP.
- Implementation monitoring will be conducted from year 4 through year 30.
- Adaptive management monitoring will occur for two years following any deviations from avoidance and minimization measures (AMMs) outlined in the HCP, including if any short or long-term trigger has been met (see Section 3.7.1).

2022 is the second year of PCMM studies for the project since implementation of the HCP. As such, PCMM studies were conducted under the baseline monitoring protocol. Monitoring effort in 2021 resulted in a detection probability below a target of 0.2 (as described in the HCP) (Atwell 2021). Therefore, prior to the start of the summer monitoring season, and in consultation with USFWS – INFO, BPW decided to increase monitoring effort for the summer and fall seasons beyond what was outlined in the HCP (Atwell 2021) in order to ensure a detection probability of at least 0.2. Monitoring methods used for the study summarized in this report are described in Section 2.

To satisfy ITP report requirements, this report summarizes estimates of bat mortality and the results of take compliance monitoring at the project completed for spring, summer, and fall 2022 under the March 25, 2021, ITP.

1.3.1 ITP Minimization Measures

The following minimization measures were proposed within the March 2021 HCP and authorized under the March 25, 2021, ITP as a means of reducing Indiana bat and northern long-eared bat take over the permit term:

- Curtailment of all spring turbine operations by feathering to a cut-in speed of 3.0 meters per second (m/s) based on a 10-minute rolling average from ½ hour before sunset to ½ hour after sunrise during the spring migratory season (April 1 to May 15) when ambient temperature is above 10 degrees Celsius (°C).
- Due to the potential presence of resident Indiana bats and northern long-eared bats within the project boundary during the summer season (May 16 to July 31), 32 turbines

within a 1,000 ft bat avoidance buffer were feathered to a cut-in speed of 6.0 m/s based on a 10-minute rolling average from ½ hour before sunset to ½ hour after sunrise from May 16 to July 31 when ambient temperature is above 10°C. Twenty-five turbines located outside of the 1,000 ft bat avoidance buffer were feathered up to 3.0 m/s based on a 10-minute rolling average from ½ hour before sunset to ½ hour after sunrise from May 16 to July 31 when ambient temperature is above 10°C.

- Curtailment of all fall turbine operation by feathering to a cut-in speed of 5.0 m/s based on a 10-minute rolling average from ½ hour before sunset to ½ hour after sunrise during the fall migratory season (August 1 – October 15) when ambient temperature is above 10°C.

The USFWS requested data verifying 2022 operational compliance for turbines 4, 15, 37, 26, 50, and 57 on April 6, May 13, June 8, July 18, July 26, August 1, September 25, and October 9. This data is provided in Appendix A.

1.4 STUDY OBJECTIVES

The objectives of the study were to do the following:

- Perform scheduled carcass searches and associated bias trials for spring, summer, and fall seasons (in accordance with the HCP).
- Collect information on bat fatalities found during the search period at the project.
- Evaluate and estimate project-specific bat mortality estimates for each survey season.
- Estimate take of Indiana and northern long-eared bats (i.e., covered species) to monitor compliance with limits authorized in the ITP.

2 SURVEY METHODS

2.1 STANDARDIZED FATALITY SEARCHES

Standardized fatality monitoring occurred in the spring (April 4 to May 12, 2022), summer (May 17 to July 31, 2022), and fall (August 1 to October 15, 2022). Turbines were assigned one of two search plot types: road and pad plot or full plot. Road and pad plots were searched out to 80 meters (m) from the center of the turbine in the spring and 100 m from the center of the turbine in the summer and fall. Searchers scanned the entire surface area of the road and pad for carcasses by walking transects, with the initial survey start location at 80 m or 100 m from the turbine, depending on the season (Figure 4). In the spring, full plot search areas comprised an 80 m by 80 m plot with the wind turbine located at the center of the search area. This area was increased to 100 m by 100 m in the summer and fall. Full plots were mowed in order to keep vegetation low and increase searcher efficiency. Plots were surveyed by walking either 13 (spring)

or 17 (summer and fall) linear transects, each approximately 6 m wide, until the entire plot was surveyed (Figure 4). Of the 57 total turbines at the project, 39 were searched as road and pad plots and 18 were searched as full plots. Each turbine's assigned plot type remained the same throughout the monitoring period.

During the spring migration season, all 57 turbines were typically searched once per week; 18 turbines were searched as full plots and only road and pad searches were conducted at the remaining 39 turbines. During the summer season, the 32 turbines located within the 1,000 ft bat avoidance buffer were typically searched daily with 10 turbines searched as full plots and 22 turbines searched as road and pad plots. The remaining turbines located outside of the bat avoidance buffer were not searched during the summer. During the fall migration season, all 57 turbines were typically searched daily with 18 turbines searched as full plots and 39 searched as road and pad plots. Some turbines, on occasion, were not searched on a particular day due to turbine maintenance, farming activity, technician availability, or inclement weather conditions (e.g., lightning, impassable roads). The lack of searches at some turbines during the scheduled timeframe was accounted for during statistical analysis.

Prior to the start of standardized surveys each season, a "clearance" search was performed to remove any carcasses from search plots. Pre-spring clearance searches were conducted at 56 turbines between March 28 and March 31, 2022, and at one turbine (turbine 26) on April 4, 2022. Because plot size increased between the spring and summer seasons, pre-summer clearance searches were conducted at all 32 summer turbines on May 16, 2022. Pre-fall clearance searches were conducted on August 1, 2022, at 25 turbines that were not searched during the summer season. All 32 summer turbines were searched on July 31, 2022, which served as both standardized summer searches and pre-fall clearance searches.

Standardized fatalities were defined as those found within the scheduled search window and search area. Incidental finds were defined as fatalities found outside of the scheduled search window or search area (i.e., off plot). Incidental finds were not included in fatality estimates but are reported in Appendix B-1.

For each bat fatality found, the following data were collected:

- Unique carcass ID
- Survey date and time
- Turbine (i.e., plot) number
- Distance and bearing from the nearest turbine
- UTM coordinates

- Species
- Carcass sex, age, and reproductive condition (when possible)
- Carcass condition (intact, partial, dismembered, fur spot(s), or other)
- Forearm length, when possible
- Ground cover where fatality was found
- Estimated time of death
- Current weather conditions / previous night weather conditions

When avian fatalities were encountered during searches, the same data as above were generally collected for the carcass (excluding forearm length); however, avian fatalities were not included in analysis for this study. A list of avian fatalities found during the 2022 fall season is provided as Appendix B-2.

2.2 SEARCHER EFFICIENCY TRIALS

The objective of searcher efficiency trials was to correct for detection bias by adjusting for trial carcasses found compared to total carcasses available to the searcher. Searcher efficiency trials were conducted each season. Trials were conducted blindly so the searcher was not aware of when trials were being conducted. Commercially available dark, large (i.e., 18 – 30 grams) mice (RodentPro.com, LLC 2022) with tails removed were used as surrogates to represent bats during searcher efficiency trials. A total of 185 trial carcasses were placed, including 55 in the spring, 51 in the summer, and 79 in the fall. A total of 90 carcasses were placed at full plot locations (26 in spring, 25 in summer, and 39 in fall), and 95 were placed at road and pad plot locations (29 in spring, 26 in summer, and 40 in fall).

Date, turbine number, distance from the turbine, and direction from the turbine were recorded prior to placement within the plot. Turbines were randomly selected for the searcher efficiency trial and no more than two carcasses were placed at a single turbine. Carcasses were discreetly marked (in a manner so the marking did not influence searcher detection) to indicate that the carcass was part of the study. Any trial carcasses that were missed on the first search following placement were collected and were not available to be found during subsequent searches.

2.3 CARCASS PERSISTENCE TRIALS

Carcass persistence trials were used to determine the length of time a carcass would remain within the search area before being scavenged (e.g., by scavengers, insects) or removed from the search area by another means (e.g., weather event, full plot mowing, agricultural tilling). Carcass persistence trials were conducted twice each season. Carcasses used for the trials consisted of

commercially available mice (as described in section 2.2) and bats (eastern red bat, silver-haired bat, big-brown bat) that were fatalities found at the project during the 2021 field season. A total of 50 mouse carcasses, 32 mixed carcasses (17 bats and 15 mice), and 50 bat carcasses were placed at randomly selected turbines in the spring, summer, and fall, respectively.

In the spring, carcasses were typically checked by the searcher on days 1, 2, 3, 4, 7, 10, 14, 21, and 30, as survey conditions allowed. In the summer and fall, carcasses were typically checked by searchers daily for 30 days, as survey conditions allowed. Condition of each carcass was recorded as intact, signs of scavenging, fur spot, or missing during each day of observation. During the spring and first summer trials, carcasses were no longer checked after being recorded as missing. During the second summer trial and both fall trials, once a carcass was recorded as “missing,” technicians continued daily checks for the carcass for the subsequent five (summer) or seven (fall) days. If the carcass was not rediscovered during this five or seven-day period, the carcass was deemed missing on the originally missed day. If a missing carcass was relocated within or after the five or seven-day period, technicians would continue checking that carcass daily. This check protocol was implemented to account for carcass checks where the carcass was missed by the observer (e.g., due to condition or location shift) rather than being truly missing. Once the 30-day trial concluded, remaining carcasses were removed.

3 STATISTICAL METHODOLOGY

3.1 GENEST

Analyses were performed separately for each season using a Generalized Fatality Estimator (GenEst) v1.4.6 (Dalthorp et al. 2018; Simonis et al. 2018). This program uses five different data sources and user-populated general inputs to run three separate, but related, analyses. The three analyses (discussed in further detail below) used to determine the mortality rate estimation include searcher efficiency, carcass persistence, and density-weighted proportion (DWP). DWP was calculated separately for each turbine based on the total number of observed carcasses, their distances from the nearest turbine, and area of the plot searched and was input into GenEst. These analyses, combined with the carcass observation data and a known search schedule, ultimately provide a median estimate of the number of fatalities at a wind facility while taking into consideration imperfect detection probability. GenEst provides a median estimate rather than a mean because the mortality probability distribution is generally right-skewed, which is not uncommon for mortality data. Because a mean estimate may be strongly influenced by the degree of skewness (Simonis et al. 2018), the median is a more robust measure.

GenEst uses a sophisticated, carcass-specific detection probability to provide fatality estimates. However, for simplicity, the program provides basic detection probability summaries that are based on searcher efficiency, carcass persistence, and average search interval. The estimates are

then stratified by the covariates or predictor variables selected for fatality estimation. While these detection probability summaries are not specifically used to provide a fatality rate estimate, an estimate of detection probability may provide useful planning insight (Simonis et al. 2018).

To determine median estimates, the number of parametric bootstrap iterations was set to 10,000 in GenEst and was used to build 90% confidence intervals around parameter estimates (Simonis et al. 2018). As this study focused on providing fatality estimates for bats only, size class was not included as a variable.

3.2 DEFINITION OF VARIABLES

Table 1 provides definitions for variables used for the GenEst statistical analysis.

Table 1. Definition of Variables use for Analysis

Variable	Definition
l	Search interval—the number of days between searches
v	Temporal coverage—the proportion of all carcasses expected to arrive during the monitored period.
p	Searcher efficiency—the probability an observer will find a present carcass during the first search after it arrived
k	The proportional change in searcher efficiency with successive searches
r_t	The estimated probability that a carcass arriving at a uniform random time in an interval of t days persists until the end of the interval
MedianCP	The median number of days a carcass will persist after day 0
\bar{M}_i	The estimated number of carcasses falling within distance band i
$\sum \bar{M}_i$	The total number of estimated carcasses
$f\bar{M}_i$	The estimated proportion of carcasses falling within distance band i
X	The total number of observed carcasses during searches
X_i	The total number of carcasses observed within distance band i , pooled across the entire wind facility
fA_{Avg_i}	The proportion of area surveyed in distance band i averaged across all turbines
$fA_{Search_{i,j}}$	The proportion of area surveyed within distance band i at turbine j
f_{within}	A correction factor representing the estimated proportion of fatalities occurring within the turbine search radius. This correction factor is applied to the calculated DWP for RP to account for carcasses falling outside of the search radius. For this study, this value was set to 0.99.
a	Spatial coverage—a density-weighted proportion (DWP) of carcasses falling within the searched area.
DWP_j	The calculated, uncorrected DWP for turbine j
DWP_{C_j}	The corrected DWP value for turbine j . This is the product of $DWP_j * f_{within}$.
g	The probability of detection
M^*	The estimated number of fatalities
λ	Fatality rate
Ba and Bb	Parameters that characterize the detection probability

3.3 SEARCHER EFFICIENCY

Searcher efficiency is the probability that a searcher will find a carcass given that the carcass falls within the search area (Simonis et al. 2018). All trial carcasses (i.e., mice and bats) were pooled to represent a single size class. Searcher efficiency was modeled separately for each season with two parameters: p , the probability that a present carcass is found during the first search after it arrived, and k , the proportional change in searcher efficiency with successive searches. Plot Type (full plot or road and pad plot) was included as a predictor variable. Data from all searcher efficiency trials each season were pooled, and searcher efficiency was modeled with k set at 0.75. While searchers in this study had only one opportunity to find trial carcasses, data suggests that k tends to remain relatively consistent at 0.75 (Dalthorp 2019 pers. comm.).

GenEst provided corrected Akaike information criterion (AICc) results for two models per season (Table 2). AICc estimates the relative quality of statistical models for a given set of data. Models with lower AICc scores are generally considered to fit the data better while using fewer predictor variables.

Table 2. Models Evaluated for Searcher Efficiency Trials

Model	k value ^a	AICc ^b	ΔAICc ^c
Spring			
$p \sim \text{constant}$	k fixed at 0.75	38.78	0.00
$p \sim \text{PlotType}$	k fixed at 0.75	40.18	1.40
Summer			
$p \sim \text{constant}$	k fixed at 0.75	52.12	0.00
$p \sim \text{PlotType}$	k fixed at 0.75	52.25	0.13
Fall			
$p \sim \text{PlotType}$	k fixed at 0.75	41.89	0.00
$p \sim \text{constant}$	k fixed at 0.75	45.78	3.89

^a k is the proportional change in searcher efficiency with successive searches. It remains fixed at 0.75 per D. Dalthorp (personal communication).

^b AICc is the corrected Akaike's Information Criterion.

^c ΔAICc is the difference in AICc values between a particular model and the top model. When comparing a set of models, lower ΔAICc values are generally considered better models.

The $p \sim \text{constant}$ model was selected for spring and summer fatality estimation, whereas the $p \sim \text{PlotType}$ model was selected for fall fatality estimation (Table 3). These models were selected as they were the lower AICc model for each season (spring ΔAICc = 1.40, summer ΔAICc = 0.13, and fall ΔAICc = 3.89 where ΔAICc is the difference between the model with the lowest and second lowest AICc value).

Table 3. Searcher Efficiency and Carcass Persistence Models Selected for Fatality Estimation in GenEst

Analysis	Model ^a
Spring	
Searcher Efficiency	$p \sim \text{constant}$
Carcass Persistence	loglogistic distribution; $l \sim \text{constant}$, $s \sim \text{PlotType}$
Summer	
Searcher Efficiency	$p \sim \text{constant}$
Carcass Persistence	Weibull distribution; $l \sim \text{constant}$, $s \sim \text{constant}$
Fall	
Searcher Efficiency	$p \sim \text{Plot Type}$
Carcass Persistence	loglogistic distribution; $l \sim \text{constant}$, $s \sim \text{PlotType}$

^a For carcass persistence, "l" refers to location and "s" refers to scale in GenEst.

3.4 CARCASS PERSISTENCE

Carcass persistence is the probability that a carcass arriving on day 0 will remain on day t (e.g., despite scavenging, decomposition, mowing, weather event, etc.) (Simonis et al. 2018). All trial carcasses (i.e., mice and bats) were pooled to represent a single size class each season. Data from both carcass persistence trials were pooled each season, as well. For 50 trial carcasses in the spring and fall, and 32 trial carcasses in the summer, the last day of detection from day 0 and first day of absence from day 0 were input into GenEst with Plot Type used as predictor variable. Four distributions were modeled: exponential, Weibull, lognormal, and loglogistic. The resulting 14 models per season were compared using AICc (Appendix C), and the most parsimonious model was selected for each season (Table 3). The selected model for both the spring and fall was the loglogistic distribution with the location formula constant and the scale formula a function of plot type ($\Delta\text{AICc} = 1.40$ and 3.89 in spring and fall, respectively). The selected model for the summer was the Weibull distribution with constant location and scale formulas ($\Delta\text{AICc} = 1.11$).

3.5 DENSITY-WEIGHTED PROPORTION

DWP is the expected proportion of carcasses to fall within the searched area of each individual turbine (Simonis et al. 2018). This estimated value takes into consideration the distance of a carcass from the turbine as carcass density around a turbine may differ with increasing distance from the turbine (Hull and Muir 2010).

For road and pad plots, pooled counts of carcasses within 10 m distance bands were used to estimate the proportion of carcasses falling within each band, $f\hat{M}_i$, where i = the distance band (e.g., 0 to 10 m, out to a maximum of 80 m in spring and 100 m in summer and fall). These proportions were then multiplied by the turbine-specific proportion of searched area in the plot at each distance band, i . Turbine-specific road and pad DWPs were calculated based on bat fatalities observed during the 2022 monitoring season pooled across spring, summer, and fall to

provide a larger sample size for calculating DWP. Only non-incidental carcasses found during road and pad searches were used for DWP calculation. Carcasses located more than 80 m from the turbine were excluded for spring DWP analysis but included in summer and fall DWP analysis. DWP was used to calculate a fatality estimate for each season.

Specifically, $f\hat{M}_i = \hat{M}_i / \sum \hat{M}_i$ where $\hat{M}_i = X_i / fA_{Avg_i}$ and $\sum \hat{M}_i$ is the sum of \hat{M} across all distance bands. X_i is the number of pooled carcass observations in each distance band, i , and fA_{Avg_i} is the average proportion of area surveyed in each distance band, i , across all turbines assigned to road and pad plots. DWP at each turbine is then calculated as $DWP_j = \sum (f\hat{M}_i * fA_{Search_{i,j}})$, where j is the specific turbine number and $fA_{Search_{i,j}}$ is the proportion of area surveyed within distance band i at turbine j .

The calculated DWP within the 80 m and 100 m search radii (DWP_j) were then adjusted to account for carcasses falling beyond each search radius using $DWP_{C_j} = DWP_j * f_{within}$ where f_{within} is the estimated proportion of fatalities occurring within the search radius. For this study, f_{within} is determined from publicly available results from similar studies.

Hull and Muir (2010) reported percentile distances of the fall zone modeled for bats at small, medium, and large turbine sizes based on data from their study sites. For large size turbines (94 m hub height and 112 m rotor diameter, similar to those in operation at the project), modeling suggested that 99% of bat carcasses fell within 66.46 m of the turbine (Hull and Muir 2010). This is less than the 80 m and 100 m search radii of this study's road and pad plots. Therefore, turbine-specific DWP values for road and pad plots were calculated as $DWP_{C_j} = DWP_j * 0.99$. The average corrected DWP for road and pad plots at the project in 2022 was 0.0754 for spring and fall, and 0.0700 for summer. Average DWP at road and pad plots was based on 39 road and pad plots in the spring and fall and 22 in the summer.

The Fowler Ridge HCP (WEST 2013) estimated the proportion of bat fatalities to fall within its square 80 m x 80 m full plots' dimensions based on a 2011 PCMM study that assessed carcasses within an 80-m radius circular full plot (Good et al. 2012). Fowler Ridge Wind Farm (FRWF) is located approximately 119 miles west of the project, in Benton County Indiana, and is located within a similar physiography and is at a similar elevation as the project. FRWF studies were designed with a robust sample size of large cleared plots that were used to provide mortality estimates that better accounted for carcasses found at greater distances from turbines (Good et al. 2012). The Fowler Ridge HCP estimated that 23.4% of fatalities fell beyond its square 80 m x 80 m full plots (Good et al. 2012). Therefore, DWP values for full plot locations at the project in the spring were set at 0.766 (i.e., approximately 76.6% of bat fatalities fall within the 80 m x 80 m square plot). Using the full set of fatality data from the 2011 PCMM season at Fowler Ridge Wind Farm (Good et al. 2012), DWP values for 100 m x 100 m full plot locations at the project in the

summer and fall were calculated as 0.889 (i.e., approximately 88.9% of bat fatalities fall within the 100 m x 100 m square plot).

3.6 PROJECT-SPECIFIC FATALITY ESTIMATE

To calculate a fatality estimate using GenEst, searcher efficiency models and carcass persistence models were first selected for each season (see Sections 3.3 and 3.4 above; Table 3). For searcher efficiency, the “constant” model ($p \sim \text{constant}$) was selected for spring and summer, whereas the “plot type” model ($p \sim \text{PlotType}$) was selected for fall. For carcass persistence, a loglogistic distribution with the location formula constant and the scale formula a function of plot type (i.e., $l \sim \text{constant}$, $s \sim \text{PlotType}$) was selected for spring and fall, whereas a Weibull distribution with both location and scale formulas constant (i.e., $l \sim \text{constant}$, $s \sim \text{constant}$) was selected for summer.

Other inputs required to calculate mortality in GenEst included the *Fraction of Facility Surveyed*, turbine-specific *Density-Weighted Proportions* (discussed above), and the *Observation Date* for each carcass found. GenEst combines the carcass *Observation Date* with *Turbine Search Schedule* (uploaded to GenEst as a separate database) to estimate detection probability following arrival (Simonis et al. 2018). All 57 turbines within the project were surveyed for carcasses in the spring and fall. Therefore, *Fraction of Facility Surveyed* was set to 1 for these seasons. In the summer, all 32 turbines within the bat avoidance buffer were surveyed. These turbines were operating with a different cut-in speed than turbines outside of the bat avoidance buffer. Therefore, *Fraction of Facility Surveyed* was also set to 1 to provide a summer fatality estimate for turbines only within the bat avoidance buffer. *Density-weighted Proportion* and *Turbine Search Schedule* are provided as separate CSV files that are uploaded to GenEst.

3.7 EVIDENCE OF ABSENCE

Evidence of Absence (EoA) software version 2.0 (Dalthorp et al. 2017) multiple class module was used to model estimated take of federally listed endangered Indiana bats and federally listed threatened northern long-eared bats during the monitoring period. EoA uses several parameters to estimate a detection probability (g), which is ultimately used to estimate take levels at a user-defined credibility level. Detection probability is a function of search interval, timespan of survey effort, spatial (a) and temporal (v) coverage, searcher efficiency (p), the factor by which searcher efficiency changes between subsequent searches (k), and carcass persistence (r).

Within the multiple class module, total mortality (M) was estimated with a 50% credibility level and g parameters were calculated from monitoring data by adding a search class for each plot type and season. A credibility level of 50% was used as this value provides a median estimate. Inputs used for each class (i.e., plot type per season) are provided in Table 4.

Table 4. Search Class Inputs for Multiple Class Analysis in EoA

Variable	Spring		Summer		Fall	
	Full	Road and Pad	Full	Road and Pad	Full	Road and Pad
Search Schedule						
Start of monitoring	2022-04-04		2022-05-17		2022-08-01	
Search interval (days)	7		1		1

Fatality Estimation						
Indiana bat carcass count (X)	0	0	0	0	1	0
Northern long-eared bat carcass count (X)	0	0	0	0	0	0
Credibility level	0.5	0.5	0.5	0.5	0.5	0.5

Mortality monitoring began on April 4, 2022, May 17, 2022, and August 1, 2022, for spring, summer, and fall seasons, respectively. Surveys were conducted once per week for six weeks in the spring and daily for 76 days in both the summer and fall. Temporal coverage was set to 1 for all seasons in order to keep the period of inference restricted to the season in question.

Searcher efficiency and carcass persistence data were based on field trials, and the results were entered into EoA. The factor by which searcher efficiency changes between subsequent searches was set to 0.75 (Dalthorp 2019 pers. comm.) and persistence distributions recommended by EoA as the most appropriate models were selected for each season and plot type. For spring carcass persistence analysis, the lognormal distribution was selected for both full plots and road and pad plots. However, while these models were recommended by EoA, it is worth noting that the log-logistic model had a lower ΔAICc than the lognormal model ($\Delta\text{AICc} = 0.8$ and 0.05 for full plots and road and pad plots, respectively). For summer carcass persistence analysis, exponential and lognormal distributions were selected for full plots and road and pad plots, respectively. For fall carcass persistence analysis, lognormal and exponential distributions were selected for full plots and road and pad plots, respectively. While the lognormal distribution was selected for full plots in the fall, it is worth noting that the log-logistic model had a lower ΔAICc than the lognormal model ($\Delta\text{AICc} = 0.53$).

One Indiana bat carcass and no northern long-eared bat carcasses were found over the course of standardized surveys in spring, summer, or fall. The Indiana bat fatality was discovered at a full plot in the fall. Therefore, the analysis was run twice: once with carcass count (X) set to one for full plots in the fall (and zero for all other seasons) to represent observed Indiana bat take, and once with carcass count set to zero for all search classes to represent observed northern long-eared bat take. Searcher efficiency and carcass persistence estimates using EoA for each search class are provided in Section 4.6.

Associated Ba and Bb values, which are parameters that characterize the detection probability, are also provided with the EoA search class output. These Ba and Bb values (see Section 4.6) for each search class were then entered into EoA's multiple class module to provide a single combined take estimate for each covered species during the monitoring period.

Spatial coverage for each plot type and season was manually entered into the "dwp" field of the multiple class module. Spatial coverage was the average DWP (see Section 3.5) of turbines searched for each plot type and season (i.e., 0.7760 and 0.8890 for full plots in spring and summer/fall, respectively, and 0.0754 and 0.0700 for road and pad plots in spring/fall and summer, respectively), weighted by the proportion of each plot type for each season (i.e., 0.3158 and 0.3125 for full plots in spring/fall and summer, respectively, and 0.6842 and 0.6874 for road and pad plots in spring/fall and summer, respectively) and the estimated seasonal proportions of *Myotis* activity, as described in the HCP for Bluff Point (Atwell 2021). Spring, summer, and fall

Myotis activity was estimated as 4%, 30%, and 66%, in the spring, summer, and fall, respectively. Therefore, spatial coverage at full plots was 0.0098, 0.0833, and 0.1853 in the spring, summer, and fall respectively. Spatial coverage at road and pad plots was 0.0021, 0.0144, and 0.0340 in the spring, summer, and fall, respectively. Approximately 67.1% of the expected fall zone for bats was unsearched. Therefore, 0.6710 was entered into the “dwp” field for the “unsearched” class in the multiple class module. Spatial coverage for the summer was based on the 32 searched turbine plots located within the bat habitat avoidance buffer only as it was assumed that no take of covered species occurred outside of this buffer during the summer.

Cumulative take estimates (M^*) will be tracked with a 50% credibility level over the life of the ITP using the “Track past mortality” option in EoA’s multiple years module.

3.7.1 Adaptive Management Triggers

The EoA software has incorporated a framework that addresses specific adaptive management “triggers” to help ensure permit compliance and potentially alleviate the project from current AMMs described in Section 6.2 of the HCP (Atwell 2021). Adaptive management triggers built into the software include the short-term trigger, long-term trigger, and reversion trigger (Dalthorp et al. 2017), as described below:

- The short-term trigger acts as a warning tool and fires when the annual fatality rate is greater than a given threshold over the course of one or a few years. BPW will utilize a 3-year window for the short-term trigger against the estimated annual take (5.5 Indiana bats and 2.8 northern long-eared bats) with a 99% credibility level (Atwell 2021), as recommended by the software to protect against the trigger firing unnecessarily (Dalthorp et al. 2017). The short-term trigger was not applicable to the 2022 monitoring results as it was the second year of monitoring under the HCP and ITP.
- The long-term trigger indicates when total cumulative take has exceeded the authorized threshold (i.e., 165 Indiana bats and 84 northern long-eared bats) with a certain credibility level. As described above, BPW will track estimated cumulative take (M^*) using EoA’s multiple years module with a 50% credibility level. This credibility level was determined to most accurately track fatality rates over time while reducing the likelihood of a false trigger (i.e., firing before the cumulative take limit has been exceeded) (Dalthorp et al. 2017).
- The reversion trigger indicates when fatality rates are low enough to allow for a less restrictive operational minimization strategy that will not result in annual fatality rates exceeding the take limit at a given credibility level. BPW expects to reduce the annual take of Indiana bats from 5.5 to 2.09 bats and northern long-eared bats from 2.8 to 1.07 bats. BPW will use the reversion test against the lesser of the expected take threshold (i.e., 2.09

Indiana bats and 1.07 northern long-eared bats) or the average annual take rate as calculated using EoA after three years of baseline monitoring. BPW will initially run the reversion test with a 99% credibility level and 50% assumed relative mortality rate (ρ) in Year 6, allowing for 3 years of Baseline Monitoring and 3 years of Implementation Monitoring to be completed prior to considering reducing AMMs.

4 RESULTS

4.1 BAT FATALITY SURVEYS

Throughout the spring, summer, and fall seasons at the project, 4,577 road and pad plot and 2,159 full plot searches were completed during standardized surveys, excluding clearance searches at 18 full plots and 39 road and pad plots prior to the spring, 10 full plots and 22 road and pad plots prior to the summer, and eight full plots and 17 road and pad plots prior to the fall. During the study, 235 bats representing seven species were found across 47 turbine locations during standardized searches (Figures 5a-c). Silver-haired bat (*Lasionycteris noctivagans*) and eastern red bat (*Lasiurus borealis*) were the most commonly found species, followed by big brown (*Eptesicus fuscus*) and hoary bat (*Lasiurus borealis*) (Table 5). Fatality counts of all bat species found during standardized surveys, as well as the proportion of all bats represented by each species, are presented in Table 5.

Table 5. Species Composition of Observed Bat Fatalities

Common Name	Federal Status ^a	State Status ^b	Scientific Name	Count ^c	Percentage of All Bat Fatalities
Silver-haired bat	-	SC	<i>Lasionycteris noctivagans</i>	69	29.4%
Eastern red bat	-	SC	<i>Lasiurus borealis</i>	68	28.9%
Big brown bat	-	-	<i>Eptesicus fuscus</i>	56	23.8%
Hoary bat	-	SC	<i>Lasiurus cinereus</i>	37	15.7%
Seminole bat	-	-	<i>Lasiurus seminolus</i>	3	1.3%
Evening bat	-	SE	<i>Nycticeius humeralis</i>	1	0.4%
Indiana bat	FE	SE	<i>Myotis sodalis</i>	1	0.4%
All Species	-	-	-	235	100.0%

^a FE = federally listed endangered. A hyphen indicates no listing status.

^b SE = state-listed endangered; SC = state special concern. A hyphen indicates no listing status.

^c Incidental finds were excluded from analysis and are not included in this table.

In addition to the 235 bats found during standardized surveys, 14 bats were found incidentally, including bats found during clearance surveys and outside of standardized search areas or scheduled searches. A list of all bat fatalities found during searches, including incidentals not summarized in Table 5, is provided in Appendix B-1. Avian fatalities were not included in the analysis; however, a list of avian fatalities found during searches is provided in Appendix B-2.

Of the 235 bats included in the analysis, 14 fatalities (6.0%) were found during the spring season, 30 fatalities (12.8%) were found during the summer season, and 191 fatalities (81.3%) were found during the fall season (Table 6).

Table 6. Total Bat Fatalities Found by Season during Standardized Searches

Season	Total Bats ^a	Percentage
Spring	14	6.0%
Summer	30	12.8%
Fall	191	81.3%
Total	235	100.0%

^a Incidental finds were excluded from analysis and are not included in this table.

More bat fatalities were found at full plots compared to road and pad plots (159 fatalities, or 67.7% at full plots; 76 fatalities, or 32.3% at road and pad plots). At full plots, a majority of fatalities were found within 40 m of the turbine (57.2%), though the distance band with the most fatalities found was the 40 to 50 m distance band. At road and pad plots, a majority of fatalities were found within 20 m of the turbine (57.9%) with most fatalities being found within the 0 to 10 m distance band. A breakdown of the distribution of bat fatalities at each plot type is provided in Table 7.

Table 7. Total Counts of Bat Fatalities by Plot Type and Distance from Turbine

Distance Band (m)	Full Plots ^a	Percentage ^{a, b} (Full Plots)	Roads/Pads Plots	Percentage ^b (Road and Pad Plots)	Total Standardized Fatalities ^c	Percentage ^b (All Plots)
0 to 10	19	11.9%	34	44.7%	53	22.6%
10 to 20	29	18.2%	10	13.2%	39	16.6%
20 to 30	19	11.9%	17	22.4%	36	15.3%
30 to 40	24	15.1%	7	9.2%	31	13.2%
40 to 50	41	25.8%	3	3.9%	44	18.7%
50 to 60	23	14.5%	4	5.3%	27	11.5%
60 to 70 ^d	4	2.5%	1	1.3%	5	2.1%
70 to 80	0	0.0%	0	0.0%	0	0.0%
80 to 90 ^e	N/A	N/A	0	0.0%	0	0.0%
90 to 100 ^e	N/A	N/A	0	0.0%	0	0.0%
Total	159	67.7%	76	32.3%	235	100.0%

^a N/A indicates not applicable. The maximum distance a fatality could be found within the standardized 80 m x 80 m and 100 m x 100 m full plots was approximately 56.6 m and 70.7 m, respectively (i.e., the corners of the square plots).

^b Percentage for each distance band is based on the total number of standardized fatalities for each plot type. The total percentage for each plot type is based on all plots combined.

^c Incidental finds were excluded from analysis and are not included in this table.

^d Fatalities found at full plots during the spring could not be found within this distance band as the 80 m x 80 m square extended to a maximum of approximately 56.6 m.

^e Fatalities found at road and pad plots during the spring could not be found within this distance band as search radius extended to a maximum of 80 m.

4.2 SENSITIVE SPECIES

One federally and state-listed endangered Indiana bat fatality was found over the course of standardized spring, summer, and fall surveys (Figure 6). This fatality was found at turbine 44 (full plot) on August 29, 2022. No northern long-eared bats were discovered during 2022 PCMM surveys. Section 4.6 provides take estimates for Indiana and northern long-eared bats, which are species covered under the HCP (Atwell 2021). No federally listed threatened or endangered species were found incidentally. One state-listed endangered evening bat (*Nycticeius humeralis*) was found over the course of spring, summer, and fall surveys (Figure 6). The evening bat was found at turbine 54 (full plot) on May 12, 2022. No state-listed endangered species were found incidentally.

4.3 SEARCHER EFFICIENCY

As previously described, a total of 185 trial carcasses were placed throughout the study period, including 55 in the spring, 51 in the summer, and 79 in the fall. Ninety carcasses were placed at full plot locations (26 in spring, 25 in summer, and 39 in fall) and 95 were placed at road and pad plot locations (29 in spring, 26 in summer, and 40 in fall). Twenty-three carcasses were scavenged prior to the search, including five in the spring (four from full plots and one from a road and pad plot), one in the summer (from a road and pad plot), and 17 in the fall (12 from full plots and five from road and pad plots). These carcasses were subsequently removed from the searcher efficiency calculation. The total number of available carcasses for searchers is presented in Table 8. Searcher efficiency was higher at road and pad plots (92.0%, 88.0%, and 97.1% in spring, summer, and fall, respectively; Table 8) compared to full plots (84.0%, 72.0%, and 77.8% in spring, summer, and fall, respectively; Table 8). Searcher efficiency among seasons was relatively similar overall with 88.0% in the spring, 80.0% in summer, and 88.7% in fall (Table 8).

Table 8. Searcher Efficiency Estimates by Season and Plot Type

Predictor Variable	n ^a	p ^b	90% Confidence Interval	
Spring				
Full Plots	25	0.840	0.682	0.928
Road and Pad Plots	25	0.920	0.774	0.975

Road and Pad Plots	35	0.971	0.865	0.994
Overall	62	0.887	0.802	0.938

^a n is the number of carcasses placed for the searcher efficiency trial excluding carcasses scavenged prior to search.

^b p is the calculated searcher efficiency.

4.4 CARCASS PERSISTENCE

In all, 132 trial carcasses were placed throughout the study period, including 50 each in the spring and fall, and 32 in the summer. A total of 25 carcasses were placed at each plot type in both spring and fall, whereas 17 carcasses were placed at full plots and 15 were placed at road and pad plots in summer. After one day, 78.0%, 84.4%, and 80.0% of carcasses were remaining during the spring, summer, and fall, respectively. By mid-trial (day 14 for spring; 15 for summer and fall), 11 (22.0%), 10 (31.3%), and seven (14.0%) carcasses were remaining in the spring, summer, and fall, respectively. By the end of the trial (day 30), nine (18.0%), five (15.6%), and five (10%) carcasses were remaining in the spring, summer, and fall, respectively.

The estimated overall median probabilities of persisting to day 1 after placement were 0.86, 0.89, and 0.90 in spring, summer, and fall, respectively (Table 9; Figures 7a-c). The estimated overall median probabilities of persisting to day 7 were 0.56, 0.66 and 0.53 in spring, summer, and fall, respectively (Table 9; Figures 7a-c). In general, the probability of persisting throughout the entire 30-day trial period was highest in the summer, followed by the spring, then the fall (0.39, 0.31, and 0.23 by day 28 for spring, summer, and fall respectively; Table 9; Figures 7a-c). During the spring and summer seasons, carcasses had a greater probability of persisting through the search interval (i.e., day 7 in spring; day 1 in summer) at full plots than road and pad plots (Table 9). During the fall, carcasses had a greater probability of persisting through the search interval (i.e., day 1) at road and pad plots. Based on the selected models for fatality estimation in GenEst (Table 3), median carcass persistence in the spring, summer, and fall was 4.23 days, 6.80 days, and 3.08 days, respectively. Estimates provided in Table 9 do not represent the proportion of carcasses remaining at the end of an interval of t days (where $t = 1, 3, 7, 14,$ or 28 days) but rather the probability that a carcass arriving within an interval of t days persists until the end of the interval.

^a n is the number of carcasses placed for the carcass persistence trial.

^b MedianCP is the estimated median number of days a carcass will persist after day 0.

^c Probability of persistence is the estimated median probability that a carcass arriving at a uniform random time in an interval of t days (i.e., 1, 3, 7, 14, 28 days) persists until the end of the interval.

^d In spring and fall, overall estimates were determined using a loglogistic distribution with constant location and scale formulas; however, this model was not selected for fatality estimation in GenEst.

^e In summer, estimates for road and pad plots and full plots were determined using a Weibull distribution with the location formula constant and the scale formula a function of Plot Type; however, this model was not selected for fatality estimation in GenEst.

4.5 PROJECT-SPECIFIC FATALITY ESTIMATION

In total, 235 bat fatalities (Appendix B-1) were found during standardized searches and input into GenEst to calculate adjusted project-specific fatality estimates for each season. The overall probability of detection (g) was similar in summer and fall, but lower in the spring (Table 10). The lower detection probability in the spring is likely a result of less frequent turbine searches compared to the summer and fall.

Probability of detection was similar at full plots and road and pad plots in the spring (Table 10). In the summer, full plots tended to have a higher probability of detection than road and pad plots, driven primarily by the higher persistence rates. In the fall, road and pad plots tended to have a higher probability of detection than full plots, driven by higher searcher efficiency and carcass persistence rates at road and pad plot locations during this season. As previously mentioned, the g -values provided in GenEst (and presented in Table 10) are a simplistic estimate based on searcher efficiency estimates, carcass persistence estimates, and the average search interval. However, these estimates do not incorporate spatial coverage of survey plots (i.e., DWP).

Table 10. Detection Probability Estimates by Season and Plot Type

Plot Type	Estimated Detection Probability (g) ^a	90% Confidence Interval (lower)	90% Confidence Interval (upper)
Spring			
Full Plots	0.577	0.474	0.684
Road and Pad Plots	0.547	0.480	0.619
Overall ^b	0.544	0.454	0.634
Summer			
Full Plots ^c	0.881	0.779	0.950
Road and Pad Plots ^c	0.795	0.674	0.898
Overall	0.840	0.746	0.912
Fall			
Full Plots	0.757	0.666	0.848
Road and Pad Plots	0.929	0.864	0.971
Overall ^d	0.860	0.795	0.916

^a The g -values presented in this table are a function of the selected searcher efficiency model, the selected carcass persistence model, and the average search interval. They do not account for spatial coverage (i.e., DWP).

^b The overall detection probability in spring was determined using constant searcher efficiency and carcass persistence models. While a constant searcher efficiency model was used for spring fatality estimation in GenEst, a constant carcass persistence model was not selected as the scale formula was modeled as a function of Plot Type.

^c The detection probabilities for full plots and road and pad plots in summer were determined using a constant searcher efficiency model and a carcass persistence model with the location formula constant and the scale formula a function of Plot Type. While a constant searcher efficiency model was selected for summer fatality estimation in GenEst, a carcass persistence model including Plot Type as a predictor variable was not selected for fatality estimation in GenEst.

^d The overall detection probability in fall was determined using constant searcher efficiency and carcass persistence models. However, to estimate the fall fatality rate in GenEst, searcher efficiency and carcass persistence were both modeled as a function of Plot Type.

The median fatality estimate was highest in the fall (20.27 bat fatalities/turbine or 9.65 bat fatalities/MW) followed by the summer (4.07 bat fatalities/turbine or 1.94 bat fatalities/MW) then spring (2.66 bat fatalities/turbine or 1.27 bat fatalities/MW) (Table 11).

Table 11. Bat Fatality Estimates by Season

Season	Total Bats ^a	Percentage ^b	Median Fatality Estimate	90 % Confidence Interval (lower)	90 % Confidence Interval (upper)
Facility-Wide

^a Incidental finds were excluded from analysis and are not included in this table.

^b Percentage is the percent of total bats found during each season.

^c Based on 57 turbines for spring and fall, and 32 turbines for summer

^d Based on 119.7 MW for spring and fall, and 67.2 MW for summer

4.6 ESTIMATED TAKE OF COVERED SPECIES

One Indiana bat fatality, a species covered under the HCP (Atwell 2021), was found over the course of standardized surveys in 2022. No northern long-eared bat fatalities were found at the project in 2022.

Results from the searcher efficiency and carcass removal trials, as well as the site coverage were input into EoA to model estimated Indiana and northern long-eared bat take. Using the multiple class module, EoA estimated searcher efficiency at full plots to be 0.840 (95% confidence interval: 0.663, 0.943), 0.720 (95% confidence interval: 0.527, 0.865), and 0.778 (95% confidence interval: 0.598, 0.902) in the spring, summer, and fall, respectively. Searcher efficiency at road and pad plots was estimated to be 0.920 (95% confidence interval: 0.767, 0.983), 0.880 (95% confidence interval: 0.713, 0.965), and 0.971 (95% confidence interval: 0.874, 0.997) in the spring, summer, and fall, respectively.

For a search interval of seven days in the spring, carcass persistence (*r*) was estimated to be 0.637 (95% confidence interval: 0.490, 0.771) and 0.511 (95% confidence interval: 0.360, 0.689) for full

plots and road and pad plots, respectively (Table 4). For a search interval of one day, carcass persistence (r) during the summer season was estimated to be 0.967 (95% confidence interval: 0.942, 0.981) at full plots and 0.868 (95% confidence interval: 0.706, 0.980) at road and pad plots (Table 4). For a search interval of one day, carcass persistence (r) during the fall season was estimated to be 0.850 (95% confidence interval: 0.714, 0.955) at full plots and 0.905 (95% confidence interval: 0.860, 0.936) at road and pad plots (Table 4).

Ba and Bb values, detection probabilities, and spatial coverage values that were input into the multiple classes module for each plot type and season are shown in Table 12, below. The overall spatial coverage for full plots and road and pad plots combined was 0.3290.

The estimated overall detection probability in 2022 was 0.268 (95% confidence interval: 0.241, 0.296; Ba = 267.7299 and Bb= 731.4965; Table 13). With one Indiana bat fatality found at a full plot during standardized surveys in the fall ($X = 1$), the median fatality estimate for Indiana bats (M^*) was four fatalities in 2022 and the mean mortality rate (λ) was 5.62 (95% confidence interval: 0.403, 17.570; Table 13). With no northern long-eared bat fatalities found at the project in 2022, the median fatality estimate for northern long-eared bats was zero fatalities in 2022 and the mean λ was 1.87 (95% confidence interval: 0.002, 9.426; Table 13). EoA outputs are provided in Appendix D.

The “Track past mortality” option in EoA’s multiple years module was used to track cumulative take with a 50% credibility level at the project over the life of the ITP. The overall detection probability following two years of baseline monitoring is 0.196 (95% confidence interval: 0.179, 0.214). The cumulative median take estimates for Indiana and northern long-eared bats after two years are six and one fatalities, respectively (Table 14). Cumulative mean λ estimates are 7.674 and 2.558 for Indiana and northern long-eared bat, respectively (Table 14). As such, the overall annual mean λ after two years of monitoring is 3.837 (95% confidence interval: 0.275, 12.000) Indiana bats and 1.279 (95% confidence interval: 0.00126, 6.430) northern long-eared bats (Appendix D).

Table 12. Multiple Class Module Inputs to Estimate Take of HCP-Covered Species using EoA

Season	Plot Type	dwp ^a	Carcass County (X) by Species	Ba ^b	Bb ^b	Detection Probability (g)	95% Confidence Interval for g (lower limit)	95% Confidence Interval for g (upper limit)
Spring	Full Plot	0.0098	Indiana bat: 0 Northern long-eared bat: 0	25.2100	20.1480	0.556	0.4110	0.6960

^a CI = Confidence Interval

5 DISCUSSION

Over the course of the study, 235 bat fatalities representing seven species were found during standardized surveys. Using GenEst, the estimated adjusted fatality rates in the spring, summer, and fall were 2.66 bats/turbine (1.27 bats/MW; 151.56 total bats), 4.07 bats/turbine (1.94 bats/MW; 130.14 total bats), and 20.27 bats/turbine (9.65 bats/MW; 1155.60 total bats), respectively. While the spring and fall fatality estimates were for all 57 turbines at the project, the summer fatality estimate was only for 32 turbines within the bat avoidance buffer. This is because all turbines were surveyed and operating at a 3.0 m/s and 5.0 m/s cut-in speed during the spring and fall, respectively, whereas only turbines within the bat avoidance buffer were surveyed and operating at a 6.0 m/s cut-in speed in the summer. Turbines located outside of the bat avoidance buffer were not surveyed in the summer and were operating at the manufacturer's recommended cut-in speed (3.0 m/s).

Spring and summer fatality estimates at the project were slightly higher in 2022 compared to 2021 (0.93 and 1.06 bats/MW in spring and summer respectively). The fall estimate in 2022 was nearly half the fall estimate in 2021 (18.64 bats/MW). The fall estimate at the project in 2022 was also lower than the 2021 fall fatality estimate at the nearby Bitter Ridge Wind Farm (13.21 bats/MW), which is located in Jay County, Indiana, nearly adjacent to the project (Murray et al. 2022). Summer estimates for the project and Bitter Ridge Wind Farm (1.76 bats/MW) were similar. Turbines searched in summer and fall at Bitter Ridge Wind Farm were feathered below a cut-in speed of 5.0 m/s, which was the same as the project in the fall, though lower than the project's summer cut-in speed (Murray et al. 2022).

Eastern red bats, silver-haired bats, big brown bats, and hoary bats made up a majority of the fatalities found at the project and are similar to the species composition found at other wind facilities throughout the Midwest, including the Bitter Ridge Wind Farm. However, specific proportions of each species may differ (Arnett et al. 2008; AWWI 2018; Murray et al. 2022). Based on the timing of peak fatality, it is likely that these were fall migrants.

Bat fatality counts were relatively low throughout the spring and summer but higher in the fall, with fatality counts generally peaking in early to mid-August and mid-September (Figure 8). While this pattern may be partially attributed to a lower turbine cut-in speed during the fall monitoring period compared to the summer monitoring period, this temporal influx of fatalities at the project is also similar to trends from other wind facilities throughout the U.S. A majority of bat fatalities tend to correspond with the fall migratory period and dispersal from summer breeding grounds compared to the spring and summer seasons (Johnson 2005; Arnett et al. 2008; AWWI 2018). The timing of peak fatality counts at the project is generally driven by an influx of silver-haired bats in early to mid-September, though fatality counts for other species (i.e., eastern red, big brown, and hoary bats) tended to peak four to five weeks earlier (i.e., early to mid-August) (Figure 9). Eastern

red, hoary, and big brown bat fatalities at the project tended to gradually decrease through late September and early-to-mid-October. Silver-haired bat fatalities, on the other hand, decreased sharply about two weeks after peaking (Figure 9).

In the spring, bat fatalities at the project were generally distributed throughout the array and there did not appear to be any areas of concentration (Figure 5a). In the summer and fall, total bat fatality counts tended to be higher at turbines in the western portion of the project. Full plots seemed to show a decreasing trend from west to east as full plots in the western portion of the project (particularly turbines 8, 9, and 10) had higher total bat fatality counts than full plots in the central and eastern portions of the project (Figures 5b-c). On an individual turbine basis, full plots had more observed bat fatalities at the project than road and pad plots. This was expected since full plots have a greater amount of area searched compared to roads and pads, particularly at distance bands closer to the turbine tower where a greater proportion of fatalities are likely to be found (Hull and Muir 2010).

The overall detection probability of 0.268 in 2022 exceeded the target detection probability of 0.2 established in the HCP (Atwell 2021). While monitoring efforts in 2021 resulted in a detection probability of 0.124, increased search frequency and plot sizes in summer and fall of 2022 helped to increase detection probability in 2022 and result in a two-year average detection probability of 0.196.

As previously mentioned, one Indiana bat and no northern long-eared bats were detected during PCMM surveys and the cumulative take after two years of monitoring, based on EoA modelling, is estimated to be 6 Indiana bats and one northern long eared bat. The long-term trigger threshold has not been exceeded for either species. As this was the second year of baseline monitoring under the HCP, the short-term trigger is not applicable since a minimum of three years of monitoring data will be used to determine if the project is at risk of exceeding its take limit. Long-term progress toward the total authorized take limit will be tracked over the life of the ITP using EoA's multiple years module.

WTG0004 Wind Speed vs Blade Rotor Speed

WTG0004 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0004 for 05-13-2022

DateCase#	2	TurbineCase#	1		
Start Date	5/13/2022	Sunset	21:51	Start Date/Time	5/13/22 21:11
DateRef#	36659	SunRise	7:32	End Date/Time	5/14/22 8:02
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	3.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0004

WTG0004 Wind Speed vs Blade Rotor Speed

WTG0004 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Roter Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0004 for 06-08-2022

DateCase#	3	TurbineCase#	1		
Start Date	6/8/2022	Sunset	22:12	Start Date/Time	6/8/22 21:32
DateRef#	36685	SunRise	7:17	End Date/Time	6/9/22 7:47
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	3.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0004				

Bluff Point Curtailment Data Report for Turbine WTG0004 for 06-08-2022

Tag Extension	Rotor Speed	Wind Speed	Ambient Temp	Curtailment Totals:	0	0	0	Data Quality Check	Startup / Shutdown Delay
TAGS	WBP1/BP1_GE21xxx_WTG0004_Gen_RPM_PLC	WBP1/BP1_GE21xxx_WTG0004_Wind_Speed_1	WBP1/BP1_GE21xxx_WTG0004_Ambient_Temp_1	10 Min Wind Speed	Bat Curtailment Conditions?	Bat Curtailment Confirmed?	Bat Curtailment Issue?	Data Quality Check	Startup / Shutdown Delay

WTG0004 Wind Speed vs Blade Rotor Speed

WTG0004 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0004 for 07-18-2022

DateCase#	4	TurbineCase#	1		
Start Date	7/18/2022	Sunset	22:11	Start Date/Time	7/18/22 21:31
DateRef#	36725	SunRise	7:32	End Date/Time	7/19/22 8:02
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	3.0	m/s		DataQualityPct	-
Temperature Curtailment >	10	C			
Turbine	WTG0004

WTG0004 Wind Speed vs Blade Rotor Speed

WTG0004 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Roter Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0004 for 07-26-2022

DateCase#	5	TurbineCase#	1		
Start Date	7/26/2022	Sunset	22:05	Start Date/Time	7/26/22 21:25
DateRef#	36733	SunRise	7:39	End Date/Time	7/27/22 8:09
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	3.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0004

WTG0004 Wind Speed vs Blade Rotor Speed

WTG0004 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0004 for 08-01-2022

DateCase#	6	TurbineCase#	1		
Start Date	8/1/2022	Sunset	21:59	Start Date/Time	8/1/22 21:19
DateRef#	36739	SunRise	7:44	End Date/Time	8/2/22 8:14
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	5.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0004				

Bluff Point Curtailment Data Report for Turbine WTG0004 for 08-01-2022

WTG0004 Wind Speed vs Blade Rotor Speed

WTG0004 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Roter Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0004 for 09-25-2022

DateCase#	7	TurbineCase#	1		
Start Date	9/25/2022	Sunset	20:38	Start Date/Time	9/25/22 19:58
DateRef#	36794	SunRise	8:36	End Date/Time	9/26/22 9:06
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	5.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0004

WTG0004 Wind Speed vs Blade Rotor Speed

WTG0004 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0004 for 10-09-2022

DateCase#	8	TurbineCase#	1		
Start Date	10/9/2022	Sunset	20:15	Start Date/Time	10/9/22 19:35
DateRef#	36808	SunRise	8:50	End Date/Time	10/10/22 9:20
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	5.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0004

WTG0004 Wind Speed vs Blade Rotor Speed

WTG0004 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0015 for 04-06-2022

DateCase#	1	TurbineCase#	2		
Start Date	4/6/2022	Sunset	21:14	Start Date/Time	4/6/22 20:34
DateRef#	36622	SunRise	8:21	End Date/Time	4/7/22 8:51
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	3.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0015

WTG0015 Wind Speed vs Blade Rotor Speed

WTG0015 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0015 for 05-13-2022

DateCase#	2	TurbineCase#	2		
Start Date	5/13/2022	Sunset	21:51	Start Date/Time	5/13/22 21:11
DateRef#	36659	SunRise	7:32	End Date/Time	5/14/22 8:02
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	3.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0015

WTG0015 Wind Speed vs Blade Rotor Speed

WTG0015 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0015 for 06-08-2022

DateCase#	3	TurbineCase#	2		
Start Date	6/8/2022	Sunset	22:12	Start Date/Time	6/8/22 21:32
DateRef#	36685	SunRise	7:17	End Date/Time	6/9/22 7:47
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	3.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0015

WTG0015 Wind Speed vs Blade Rotor Speed

WTG0015 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0015 for 07-18-2022

DateCase#	4	TurbineCase#	2		
Start Date	7/18/2022	Sunset	22:11	Start Date/Time	7/18/22 21:31
DateRef#	36725	SunRise	7:32	End Date/Time	7/19/22 8:02
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	3.0	m/s		DataQualityPct	-
Temperature Curtailment >	10	C			
Turbine	WTG0015

WTG0015 Wind Speed vs Blade Rotor Speed

WTG0015 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0015 for 07-26-2022

DateCase#	5	TurbineCase#	2		
Start Date	7/26/2022	Sunset	22:05	Start Date/Time	7/26/22 21:25
DateRef#	36733	SunRise	7:39	End Date/Time	7/27/22 8:09
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	3.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0015

WTG0015 Wind Speed vs Blade Rotor Speed

WTG0015 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0015 for 08-01-2022

DateCase#	6	TurbineCase#	2		
Start Date	8/1/2022	Sunset	21:59	Start Date/Time	8/1/22 21:19
DateRef#	36739	SunRise	7:44	End Date/Time	8/2/22 8:14
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	5.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0015				

Bluff Point Curtailment Data Report for Turbine WTG0015 for 08-01-2022

WTG0015 Wind Speed vs Blade Rotor Speed

WTG0015 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0015 for 09-25-2022

DateCase#	7	TurbineCase#	2		
Start Date	9/25/2022	Sunset	20:38	Start Date/Time	9/25/22 19:58
DateRef#	36794	SunRise	8:36	End Date/Time	9/26/22 9:06
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	5.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0015				

Bluff Point Curtailment Data Report for Turbine WTG0015 for 09-25-2022

WTG0015 Wind Speed vs Blade Rotor Speed

WTG0015 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0015 for 10-09-2022

DateCase#	8	TurbineCase#	2		
Start Date	10/9/2022	Sunset	20:15	Start Date/Time	10/9/22 19:35
DateRef#	36808	SunRise	8:50	End Date/Time	10/10/22 9:20
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	5.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0015

WTG0015 Wind Speed vs Blade Rotor Speed

WTG0015 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0037 for 04-06-2022

DateCase#	1	TurbineCase#	3		
Start Date	4/6/2022	Sunset	21:14	Start Date/Time	4/6/22 20:34
DateRef#	36622	SunRise	8:21	End Date/Time	4/7/22 8:51
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	3.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0037

WTG0037 Wind Speed vs Blade Rotor Speed

WTG0037 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0037 for 05-13-2022

DateCase#	2	TurbineCase#	3		
Start Date	5/13/2022	Sunset	21:51	Start Date/Time	5/13/22 21:11
DateRef#	36659	SunRise	7:32	End Date/Time	5/14/22 8:02
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	3.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0037

WTG0037 Wind Speed vs Blade Rotor Speed

WTG0037 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0037 for 06-08-2022

DateCase#	3	TurbineCase#	3		
Start Date	6/8/2022	Sunset	22:12	Start Date/Time	6/8/22 21:32
DateRef#	36685	SunRise	7:17	End Date/Time	6/9/22 7:47
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	3.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0037

WTG0037 Wind Speed vs Blade Rotor Speed

WTG0037 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0037 for 07-18-2022

DateCase#	7	TurbineCase#	2		
Start Date	9/25/2022	Sunset	20:38	Start Date/Time	9/25/22 19:58
DateRef#	36794	SunRise	8:36	End Date/Time	9/26/22 9:06
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	5.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0015

WTG0037 Wind Speed vs Blade Rotor Speed

WTG0037 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Roter Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0037 for 07-26-2022

DateCase#	5	TurbineCase#	3		
Start Date	7/26/2022	Sunset	22:05	Start Date/Time	7/26/22 21:25
DateRef#	36733	SunRise	7:39	End Date/Time	7/27/22 8:09
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	3.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0037				

Bluff Point Curtailment Data Report for Turbine WTG0037 for 07-26-2022

WTG0037 Wind Speed vs Blade Rotor Speed

WTG0037 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0037 for 08-01-2022

DateCase#	6	TurbineCase#	3		
Start Date	8/1/2022	Sunset	21:59	Start Date/Time	8/1/22 21:19
DateRef#	36739	SunRise	7:44	End Date/Time	8/2/22 8:14
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	5.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0037

WTG0037 Wind Speed vs Blade Rotor Speed

WTG0037 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0037 for 09-25-2022

DateCase#	7	TurbineCase#	3		
Start Date	9/25/2022	Sunset	20:38	Start Date/Time	9/25/22 19:58
DateRef#	36794	SunRise	8:36	End Date/Time	9/26/22 9:06
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	5.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0037				

Bluff Point Curtailment Data Report for Turbine WTG0037 for 09-25-2022

WTG0037 Wind Speed vs Blade Rotor Speed

WTG0037 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0037 for 10-09-2022

DateCase#	8	TurbineCase#	3		
Start Date	10/9/2022	Sunset	20:15	Start Date/Time	10/9/22 19:35
DateRef#	36808	SunRise	8:50	End Date/Time	10/10/22 9:20
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	5.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0037

WTG0037 Wind Speed vs Blade Rotor Speed

WTG0037 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Roter Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0050 for 04-06-2022

DateCase#	1	TurbineCase#	5		
Start Date	4/6/2022	Sunset	21:14	Start Date/Time	4/6/22 20:34
DateRef#	36622	SunRise	8:21	End Date/Time	4/7/22 8:51
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	3.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0050

WTG0050 Wind Speed vs Blade Rotor Speed

WTG0050 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0050 for 05-13-2022

DateCase#	2	TurbineCase#	5		
Start Date	5/13/2022	Sunset	21:51	Start Date/Time	5/13/22 21:11
DateRef#	36659	SunRise	7:32	End Date/Time	5/14/22 8:02
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	3.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0050

WTG0050 Wind Speed vs Blade Rotor Speed

WTG0050 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0050 for 06-08-2022

DateCase#	3	TurbineCase#	5		
Start Date	6/8/2022	Sunset	22:12	Start Date/Time	6/8/22 21:32
DateRef#	36685	SunRise	7:17	End Date/Time	6/9/22 7:47
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	6.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0050

WTG0050 Wind Speed vs Blade Rotor Speed

WTG0050 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0050 for 07-18-2022

DateCase#	4	TurbineCase#	5		
Start Date	7/18/2022	Sunset	22:11	Start Date/Time	7/18/22 21:31
DateRef#	36725	SunRise	7:32	End Date/Time	7/19/22 8:02
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	6.0	m/s		DataQualityPct	-
Temperature Curtailment >	10	C			
Turbine	WTG0050

WTG0050 Wind Speed vs Blade Rotor Speed

WTG0050 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0050 for 07-26-2022

DateCase#	5	TurbineCase#	5		
Start Date	7/26/2022	Sunset	22:05	Start Date/Time	7/26/22 21:25
DateRef#	36733	SunRise	7:39	End Date/Time	7/27/22 8:09
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	6.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0050				

Bluff Point Curtailment Data Report for Turbine WTG0050 for 07-26-2022

WTG0050 Wind Speed vs Blade Rotor Speed

WTG0050 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0050 for 08-01-2022

DateCase#	6	TurbineCase#	5		
Start Date	8/1/2022	Sunset	21:59	Start Date/Time	8/1/22 21:19
DateRef#	36739	SunRise	7:44	End Date/Time	8/2/22 8:14
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	5.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0050

WTG0050 Wind Speed vs Blade Rotor Speed

WTG0050 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0050 for 09-25-2022

DateCase#	7	TurbineCase#	5		
Start Date	9/25/2022	Sunset	20:38	Start Date/Time	9/25/22 19:58
DateRef#	36794	SunRise	8:36	End Date/Time	9/26/22 9:06
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	5.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0050

WTG0050 Wind Speed vs Blade Rotor Speed

WTG0050 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0050 for 10-09-2022

DateCase#	8	TurbineCase#	5		
Start Date	10/9/2022	Sunset	20:15	Start Date/Time	10/9/22 19:35
DateRef#	36808	SunRise	8:50	End Date/Time	10/10/22 9:20
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	5.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0050

WTG0050 Wind Speed vs Blade Rotor Speed

WTG0050 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0057 for 04-06-2022

DateCase#	1	TurbineCase#	6		
Start Date	4/6/2022	Sunset	21:14	Start Date/Time	4/6/22 20:34
DateRef#	36622	SunRise	8:21	End Date/Time	4/7/22 8:51
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	3.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0057

WTG0057 Wind Speed vs Blade Rotor Speed

WTG0057 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0057 for 05-13-2022

DateCase#	2	TurbineCase#	6		
Start Date	5/13/2022	Sunset	21:51	Start Date/Time	5/13/22 21:11
DateRef#	36659	SunRise	7:32	End Date/Time	5/14/22 8:02
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	3.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0057

WTG0057 Wind Speed vs Blade Rotor Speed

WTG0057 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0057 for 06-08-2022

DateCase#	3	TurbineCase#	6		
Start Date	6/8/2022	Sunset	22:12	Start Date/Time	6/8/22 21:32
DateRef#	36685	SunRise	7:17	End Date/Time	6/9/22 7:47
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	3.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0057

WTG0057 Wind Speed vs Blade Rotor Speed

WTG0057 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0057 for 07-18-2022

DateCase#	4	TurbineCase#	6		
Start Date	7/18/2022	Sunset	22:11	Start Date/Time	7/18/22 21:31
DateRef#	36725	SunRise	7:32	End Date/Time	7/19/22 8:02
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	3.0	m/s		DataQualityPct	-
Temperature Curtailment >	10	C			
Turbine	WTG0057				

Bluff Point Curtailment Data Report for Turbine WTG0057 for 07-18-2022

Tag Extension	Rotor Speed	Wind Speed	Ambient Temp	Curtailment Totals:	0	0	0	Data Quality Check	Startup / Shutdown Delay

WTG0057 Wind Speed vs Blade Rotor Speed

WTG0057 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Roter Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0057 for 07-26-2022

DateCase#	5	TurbineCase#	6		
Start Date	7/26/2022	Sunset	22:05	Start Date/Time	7/26/22 21:25
DateRef#	36733	SunRise	7:39	End Date/Time	7/27/22 8:09
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	3.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0057				

Bluff Point Curtailment Data Report for Turbine WTG0057 for 07-26-2022

WTG0057 Wind Speed vs Blade Rotor Speed

WTG0057 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0057 for 08-01-2022

DateCase#	6	TurbineCase#	6		
Start Date	8/1/2022	Sunset	21:59	Start Date/Time	8/1/22 21:19
DateRef#	36739	SunRise	7:44	End Date/Time	8/2/22 8:14
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	5.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0057

WTG0057 Wind Speed vs Blade Rotor Speed

WTG0057 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0057 for 09-25-2022

DateCase#	7	TurbineCase#	6		
Start Date	9/25/2022	Sunset	20:38	Start Date/Time	9/25/22 19:58
DateRef#	36794	SunRise	8:36	End Date/Time	9/26/22 9:06
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	5.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0057

WTG0057 Wind Speed vs Blade Rotor Speed

WTG0057 Time Series Plot of Ambient Temperature, Wind Speed, and Blade Rotor Speed

Summary of Bluff Point Curtailment Data Report for Turbine WTG0057 for 10-09-2022

DateCase#	8	TurbineCase#	6		
Start Date	10/9/2022	Sunset	20:15	Start Date/Time	10/9/22 19:35
DateRef#	36808	SunRise	8:50	End Date/Time	10/10/22 9:20
Increment (s,m,h)	1m			Tag Prefix	BP1_GE21xxx_
Design Cut In	3.0	m/s			
Bat Curtailment Level	5.0	m/s		DataQualityPct	1.00
Temperature Curtailment >	10	C			
Turbine	WTG0057

Results for full site

Detection probability

Estimated $g = 0.268$, 95% CI = [0.241, 0.296]

Fitted beta distribution parameters for estimated g : $Ba = 267.7299$, $Bb = 731.4965$

Mortality

50% CI for $M = [2, 5]$

Estimated annual fatality rate: $\lambda = 5.62$, 95% CI = [0.403, 17.57]

Test of assumed relative weights (ρ)

Class	Assumed	Fitted (95% CI)
unsearched	0.671	NA
Spring_FP	0.010	[0.000, 0.202]
Spring_RP	0.002	[0.000, 0.213]
Summer_FP	0.083	[0.000, 0.170]
Summer_RP	0.014	[0.000, 0.176]
Fall_FP	0.185	[0.011, 0.263]
Fall_RP	0.034	[0.000, 0.149]

$p = 0.94109$ for likelihood ratio test of H_0 : assumed $\rho =$ true ρ

Mortality rates (λ) by class

Results for full site

Detection probability

Estimated $g = 0.268$, 95% CI = [0.241, 0.296]

Fitted beta distribution parameters for estimated g : $Ba = 267.7299$, $Bb = 731.4965$

Mortality

50% CI for $M = [0, 0]$

Estimated annual fatality rate: $\lambda = 1.87$, 95% CI = [0.00184, 9.426]

Test of assumed relative weights (ρ)

Class	Assumed	Fitted (95% CI)
unsearched	0.671	NA
Spring_FP	0.010	[0.000, 0.238]
Spring_RP	0.002	[0.001, 0.255]
Summer_FP	0.083	[0.000, 0.178]
Summer_RP	0.014	[0.000, 0.217]
Fall_FP	0.185	[0.000, 0.200]
Fall_RP	0.034	[0.000, 0.189]

$p = 1$ for likelihood ratio test of H_0 : assumed $\rho =$ true ρ

Mortality rates (λ) by class

Summary statistics for mortality estimates through 2 years [Indiana bat]

Results

50% CI for M = [1, 18]

Estimated overall detection probability: $g = 0.196$, 95% CI = [0.179, 0.214]

Ba = 379.95, Bb = 1557.9

Estimated baseline fatality rate (for $\rho = 1$): $\lambda = 3.837$, 95% CI = [0.275, 12]

Cumulative Mortality Estimates

Year	X	g	M*	mean		lambda	95% CI
				median	95% CI		
2021	0	0.124	1	1	[0, 14]	4.076	[0.003964, 20.57]
2022	1	0.196	6	6	[1, 18]	7.674	[0.5507, 23.97]

Annual Mortality Estimates

Year	X	g	M*	mean		lambda	95% CI
				median	95% CI		
2021	0	0.124	1	1	[0, 14]	4.0760	[0.0040, 20.5700]
2022	1	0.268	4	4	[1, 13]	5.6200	[0.4030, 17.5700]

Test of assumed relative weights (ρ) and potential bias

Fitted rho	
Assumed rho	95% CI
1	[0.006, 1.838]
1	[0.160, 1.994]

$p = 0.38316$ for likelihood ratio test of H_0 : assumed $\rho =$ true ρ

Quick test of relative bias: 1.151

Input

Year (or period)	rho	X	Ba	Bb	ghat	95% CI
2021	1.000	0	104.5	737.1	0.124	[0.103, 0.147]
2022	1.000	1	267.7	731.5	0.268	[0.241, 0.296]

Summary statistics for mortality estimates through 2 years [northern long-eared bat]

Results

50% CI for M = [0, 8]

Estimated overall detection probability: $g = 0.196$, 95% CI = [0.179, 0.214]

Ba = 379.95, Bb = 1557.9

Estimated baseline fatality rate (for $\rho = 1$): $\lambda = 1.279$, 95% CI = [0.00126, 6.43]

Cumulative Mortality Estimates

Year	X	g	M*	mean		lambda	95% CI
				median	95% CI		
2021	0	0.124	1	1	[0, 14]	4.076	[0.003964, 20.57]
2022	0	0.196	1	1	[0, 8]	2.558	[0.002528, 12.86]

Annual Mortality Estimates

Year	X	g	M*	mean		lambda	95% CI
				median	95% CI		
2021	0	0.124	1	1	[0, 14]	4.0760	[0.0040, 20.5700]
2022	0	0.268	0	0	[0, 6]	1.8730	[0.0018, 9.4260]

Test of assumed relative weights (ρ) and potential bias

Fitted rho	
Assumed rho	95% CI
1	[0.022, 1.997]
1	[0.003, 1.976]

$p = 1$ for likelihood ratio test of H_0 : assumed $\rho =$ true ρ

Quick test of relative bias: 0.864
